

MAKSYM AKSAMITNYI

FULL-STACK TYPESCRIPT DEVELOPER

Warsaw, Poland | aksamitnyi@icloud.com | aksamitny.com | [GitHub](https://github.com) | [LinkedIn](https://www.linkedin.com/in/aksamitnyi/)

I build and deploy accessible web products across the full stack with Next.js, React, NestJS and PostgreSQL. My work combines recruiter-focused UX, technical SEO, API security and production deployment. Open to remote and hybrid roles.

CORE SKILLS

Frontend	TypeScript, React, Next.js App Router, semantic HTML, responsive UI, accessibility
Backend	Node.js, NestJS, REST APIs, DTO validation, rate limiting, email delivery
Data & delivery	PostgreSQL, Prisma, Git/GitHub, Vercel, Render, CI-ready workflows
Quality	Technical SEO, structured data, security headers, linting, builds and focused tests

SELECTED PROJECT

Portfolio Website - Full-Stack Case Study [Live product](#) [Frontend](#) [Backend](#)

Solo full-stack developer responsible for product structure, UI, API, data model, security and deployment.

- Designed an end-to-end platform with a server-rendered Next.js interface, NestJS REST API and PostgreSQL content storage.
- Built recruiter-first project case studies, responsive navigation and an accessible contact workflow with inline validation and safe feedback.
- Added technical SEO foundations: canonical URLs, sitemap, robots rules, semantic headings and Person structured data.
- Hardened the API with strict validation, security headers, fail-closed access controls and contact rate limiting; deployed independently on Vercel and Render.

ENGINEERING APPROACH

Prefer small, reviewable changes, explicit validation boundaries and server-rendered metadata. Treat accessibility, performance, security and recruiter clarity as product requirements.

EDUCATION

Vistula University, Warsaw - Computer Science

March 2023 - Present

Updated October 2026. References and additional project details are available at aksamitny.com.
